

L^AT_EX for Economics and Business Administration (Part II)

Thomas de Graaff

January 26, 2017

Previously

- Pros and cons of L^AT_EX
- Why bother with learning L^AT_EX
 - for consistent/structured lay-out
 - better automation of workflow
- Compiling, referencing, formula's, text control

This session we look at

- Packages (controlling the preamble)
- Figures (how to insert them?)
- Tables (inserting plain tables)
- Automatizing tables (complex tables)
- Better looking references
- Making slides

Note: we will only touch upon these subjects

Slides

Slides are typically made with the beamer class

```
1 \documentclass{beamer}
2 \title{Another lecture}
3 \author{By a wisecrack lecturer}
4
5 \begin{document}
6   \frame{\titlepage}
7
8   \begin{frame}{Introduction}
9     %           Typically a quote from a long
10    %           dead philosopher that should
11    %           make the lecturer look smart
12    %           but usually does not.
13   \end{frame}
14 \end{document}
```

Beamer style

You can change the beamer style by:

```
1 \usetheme{Hannover}
2 \usecolortheme{dove}
3
4 % to remove those navigation symbols
5 \beamertemplatenavigationsymbolempty
6
```

(<https://www.hartwork.org/beamer-theme-matrix/> gives all possible combinations)
