

# Advanced Research Tools for Economics and Business Administration (Part II)

Thomas de Graaff

January 22, 2015

# Introduction

# Previous tutorial

Still somewhat more theoretical (why do you want to change tools)

- Importance of writing things down (reproducibility)
- Text files are the bomb:
  - scriptable
  - input and output in/for other applications
- pros and cons of  $\text{\LaTeX}$

# This tutorial

More practical, play around with  $\text{\LaTeX}$ . In specific:

- packages (make things look better)
- figures (usually import them, but sometime make them yourself)
- tables (import them!)
- slides (just copy & paste from `.tex` document)

# Making appearances

# The use of packages

There are lots of them, see CTAN

# The use of classes

# Bibliography

# Better graphs

# Import them

# Making them yourself

# Better tables

# Some guidelines

# Importing them

# Making slides

# Pros and cons

# Using beamer package
